Fund Adviser	Voya Investments, LLC.
Sub-Adviser	Voya Investment Management Co.

¹ There is no guarantee that this objective will be achieved.

Fund overview

Combines an actively-managed quantitative equity investment strategy with a call writing option strategy to create a diversified portfolio with enhanced total return potential and strong downside capture over a full market cycle.

Investment strategy

- Global equity strategy that seeks to maximize total returns and maintain lower volatility relative to the benchmark over a full market cycle. Stock selection is model driven.
- Hedges major currency exposure to help reduce volatility of returns.
- Sells call options on selected security indexes and/or ETFs, on an amount equal to approximately 50-100% of the total underlying value of the portfolio.

Investment process

Voya's disciplined three step investment process begins with utilizing a quantitative model to create a target universe of stocks with sustainable high-dividend yields within each region-sector.*

Next, we use our global multi-factor stock selection models to help identify the most attractive securities by ranking each security relative to all other securities within its region-sector.

We apply optimization techniques to help achieve the portfolio's target dividend yield, manage target beta, determine active weights, and neutralize region and sector exposures in order to create a portfolio that we believe will provide the potential for maximum total return consistent with maintaining lower volatility than the benchmark.

Performance

Voya Global Equity Dividend and Premium Opportunity Fund

* Companies that issue dividend yielding equity securities are not required to continue to pay dividends on such securities. Therefore, there is the possibility that such companies could reduce or eliminate the payment of dividends in the future.

The firm uses proprietary multi-factor sector models to filter the investment universe to identify stocks that warrant further in-depth fundamental analysis.

Past performance does not guarantee future results. The performance quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance information shown. The investment return and principal value of an investment in the Portfolio will fluctuate, so that your shares, when redeemed, may be worth more or less than their original cost.

Performance quoted does not take into consideration account transaction fees or brokerage commissions.

Total investment return at share price measures the change in the market value of your investment assuming reinvestment of dividends, capital gain distributions and return of capital distributions/allocations, if any, in accordance with the provisions of the Fund's dividend reinvestment plan. Total investment return at market share price is not annualized for periods less than one year. Closed-end funds like the Fund do not continuously offer shares for sale and are not required to buy shares back from investors upon request. Shares of closed-end funds trade on national stock exchanges. Therefore, market share prices are not directly affected by Fund expenses or fees, which ordinarily have the effect of lowering total return.

Total investment return at net asset value (NAV) has been calculated assuming a purchase at net asset value at the beginning of the period and a sale at net asset value at the end of the period; and assumes reinvestment of dividends, capital gain distributions and return of capital distributions/ allocations, if any, in accordance with the provisions of the dividend reinvestment plan. NAV is total assets less total liabilities divided by the number of shares outstanding. NAV is net of all fund expenses, including operating costs and management fees. Total investment return at net asset value is not annualized for periods less than one year.

²"Moneyness" is the term used to describe the relationship between the price of the underlying asset and the option's exercise or strike price. For example, a call (buy) option is considered "in-the-money" when the value of the underlying asset exceeds the strike price. Conversely, a put (sell) option is considered "in-the-money" when its strike price exceeds the value of the underlying asset. Options are characterized for the purpose of Moneyness as "in-the-money" when its strike price exceeds the value of the underlying asset. Options are characterized for the purpose of Moneyness as "in-the-money" ("ITM"), "out-of-the-money" ("OTM") or "at-the-money" ("ATM"), where the underlying asset value equals the strike price.

Past performance does not guarantee future results. Characteristics may be adjusted to exclude securities for which data is not available or for extreme data outliers via commonly used trimming methodologies. Holdings are subject to change. Voya Investment Management

Voya Investment Management delivers actively managed public and private market solutions that drive differentiated outcomes for clients worldwide. Our team of 300+ investment professionals manages \$336 billion* in assets. We excel at partnering with clients to understand their needs and address challenges in innovative ways, drawing on extensive expertise across fixed income, equity, and multi-asset strategies.

*As of 12/31/24. Voya IM assets of \$339 billion, as reported in Voya Financial SEC filings, represent revenue generating assets for which Voya Investment Management LLC and the registered investment advisers it wholly owns has full discretionary investment management responsibility. Voya IM assets of \$336 billion are calculated on a market value basis for all accounts.

All investing involves risks of fluctuating prices and the uncertainties of rates of return and yield inherent in investing. You could lose money on your investment and any of the following risks, among others, could affect investment performance. The following principal risks are presented in alphabetical order which does not imply order of importance or likelihood: Company; Currency; Derivative Instruments; Dividend; Environmental, Social, and Governance; Foreign (Non-U.S.) Investments/ Developing and Emerging Markets; Investment Model; Liquidity; Manager; Market; Market Capitalization; Market Disruption and Geopolitical; Operational; Option Writing; Other Investment Companies; Securities Lending. **Investors should consult the Fund's Prospectus and Statement of Additional Information for a more detailed discussion of the Fund's risks. The prospectus should be read carefully before investing. Consider the Fund's investment objective, risks, and charges and expenses carefully before investing.**

The Fund may purchase put and call options and may write (sell) put options and call options and is subject to Options Risk. The risk in writing a call option is that the Fund gives up the opportunity for profit if the market price of the security increases and the option is exercised. The risk in buying an option is that the Fund pays a premium whether or not the option is exercised. Risks may also arise from an illiquid secondary market or from the inability of counter-parties to meet the terms of the contract. When an option is exercised or closed out, the Fund may be required to sell portfolio securities or to deliver portfolio securities to satisfy its obligations when it would not otherwise choose to do so, or the Fund may choose to sell portfolio securities to realize gains to offset the losses realized upon option exercise. Such sales or delivery would involve transaction costs borne by the Fund and may also result in realization of taxable capital gains, including short-term capital gains taxed at ordinary income tax rates, and may adversely impact the Fund's after-tax returns.

The strategy employs a quantitative model to execute the strategy. Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively affect performance. Furthermore, there can be no assurance that the quantitative models used in managing the strategy will perform as anticipated or enable the strategy to achieve its objective.
