Fund Adviser	Voya Investments, LLC.
Sub-Adviser	Voya Investment Management Co.

¹There is no guarantee that this objective will be achieved.

Fund Overview

Combines an actively-managed quantitative equity investment strategy with a call writing option strategy to create a diversified portfolio with enhanced total return potential and strong downside capture over a full market cycle.

Investment Strategy

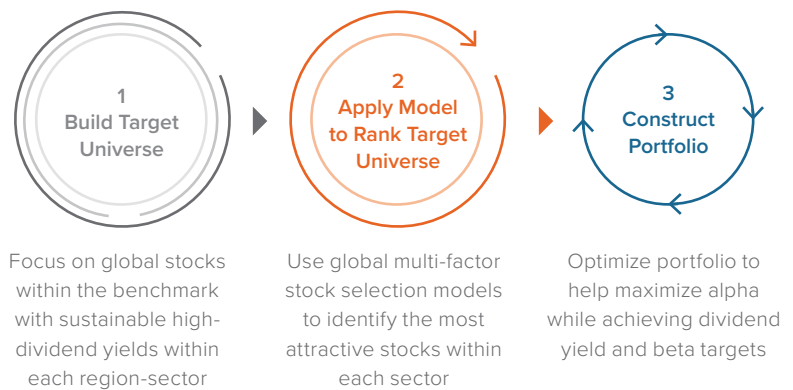

- Global equity strategy that seeks to maximize total returns and maintain lower volatility relative to the benchmark over a full market cycle. Stock selection is model driven.
- Hedges major currency exposure to help reduce volatility of returns.
- Sells call options on selected security indexes and/or ETFs, on an amount equal to approximately 50-100% of the total underlying value of the portfolio.

Investment Process

Voya’s disciplined three step investment process begins with utilizing a quantitative model to create a target universe of stocks with sustainable high-dividend yields within each region-sector.²

Next, we use our global multi-factor stock selection models to help identify the most attractive securities by ranking each security relative to all other securities within its region-sector.

We apply optimization techniques to help achieve the portfolio’s target dividend yield, manage target beta, determine active weights, and neutralize region and sector exposures in order to create a portfolio that we believe will provide the potential for maximum total return consistent with maintaining lower volatility than the benchmark.

² Companies that issue dividend yielding equity securities are not required to continue to pay dividends on such securities. Therefore, there is the possibility that such companies could reduce or eliminate the payment of dividends in the future.

The firm uses proprietary multi-factor sector models to filter the investment universe to identify stocks that warrant further in-depth fundamental analysis.

Performance

Investment Commentary

Performance

For the quarter, the Voya Global Advantage and Premium Opportunity Fund (the “Fund”) provided a total return of -0.82% on a net asset value (NAV) basis, and a total return of -6.65% on a market price basis. For the same period, the Fund’s reference index, the MSCI World Value index, returned -0.65%.

Equity Portfolio

For the quarterly reporting period, the equity sleeve of the Fund underperformed its reference index. Underperformance in the Fund was primarily driven by the core model, and in particular negative returns in the operations signal. Smaller market capitalization and industry exposure also detracted. The lower beta and higher dividend yield both contributed.

On the regional level, stock selection in Europe and the Asia Pacific Ex Japan regions detracted from returns.

Stock selection in the industrials, materials and energy sectors detracted from results. At the individual stock level, the underweight positions in Exxon Mobil Corporation and Chevron Corporation, as well as not owning Berkshire Hathaway Inc. detracted from results.

Conversely, stock selection was strongest in the communication services, utilities and consumer discretionary sectors. At the individual stock level, not owning Home Depot, Inc. and JPMorgan Chase & Co., as well as an overweight to Coterra Energy Inc. contributed the most to results.

Option Portfolio

For the period, the Fund’s covered call strategy had a positive impact on relative returns. The Fund implemented this strategy by typically writing call options on regional indices, the selection and allocation of which result from an optimization intended to track the reference

index of the portfolio closely. The strike prices of the options written were typically out of the money or near the money with expiration dates around six weeks at inception.

The Fund’s covered call strategy seeks to generate premiums and retain some potential for upside appreciation. This strategy added to returns during the period as the negative performance of the equity markets resulted in gains on the short call options.

Outlook and Current Strategy

The world and markets continuously change, but over the first four months of 2022 we have seen remarkable shifts in the landscape and asset prices. Russia’s invasion of Ukraine caught many off guard. Beyond the hardships and terror imposed on its victims, this war has cast a dark shadow of uncertainty over Europe and worsened already-existing economic risks.

These conditions have been unfavorable for most financial assets. In the United States, equity market outflows have been heavy as investors look toward rate hikes to come. Overseas equities geographically or economically exposed to the Ukraine war have struggled. Europe is struggling particularly with the impacts of higher energy prices as Russian oil and gas deliveries dwindle. Covid outbreaks continue to confront China, and lockdowns there continue to disrupt supply chains and thus global economic recovery.

Holdings Detail

Companies mentioned in this report – percentage of Fund investments, as of 03/31/22: Exxon Mobil Corporation 0%, Chevron Corporation 1.03%, Berkshire Hathaway Inc. 0%, Home Depot, Inc. 0%, JPMorgan Chase & Co. 0% and Coterra Energy Inc. 0.65%; 0% indicates that the security is no longer in the portfolio. Portfolio holdings are subject to change daily.

Past performance is no guarantee of future results. The performance quoted represents past performance. Investment return and principal value of an investment will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Performance chart does not take into consideration account transaction fees or brokerage commissions.

Total investment return at market share price measures the change in the market value of your investment assuming reinvestment of dividends, capital gain distributions and return of capital distributions/allocations, if any, in accordance with the provisions of the Fund’s dividend reinvestment plan. Total investment return at market share price is not annualized for periods less than one year. Closed-end funds like the Fund do not continuously offer shares for sale and are not required to buy shares back from investors upon request. Shares of closed-end funds trade on national stock exchanges. Therefore, market share prices are not directly affected by Fund expenses or fees, which ordinarily have the effect of lowering total return.

Total investment return at net asset value has been calculated assuming a purchase at net asset value at the beginning of the period and a sale at net asset value at the end of the period; and assumes reinvestment of dividends, capital gain distributions and return of capital distributions/allocations, if any, in accordance with the provisions of the dividend reinvestment plan. Net Asset Value is total assets less total liabilities divided by the number of shares outstanding. Net Asset Value is net of all fund expenses, including operating costs and management fees. Total investment return at net asset value is not annualized for periods less than one year.

³ "Moneyness" is the term used to describe the relationship between the price of the underlying asset and the option's exercise or strike price. For example, a call (buy) option is considered "in-the-money" when the value of the underlying asset exceeds the strike price. Conversely, a put (sell) option is considered "in-the-money" when its strike price exceeds the value of the underlying asset. Options are characterized for the purpose of Moneyness as "in-the-money" when its strike price exceeds the value of the underlying asset. Options are characterized for the purpose of Moneyness as "in-the-money" ("ITM"), "out-of-the-money" ("OTM") or "at-the-money" ("ATM"), where the underlying asset value equals the strike price.

Voya Investment Management

Voya Investment Management is the asset management business of Voya Financial, a Fortune 500 company with over 6,000 employees seeking to help clients plan, invest and protect their savings. Voya Investment Management manages approximately \$268 billion* in assets across fixed income, senior loans, equities, multi-asset strategies and solutions, private equity, and real assets. Drawing on over 40 years of experience and the expertise of 250+ investment professionals, the firm's capabilities span traditional products and solutions as well as those that cannot be easily replicated by an index.

At Voya Investment Management, a heritage of partnership and innovation serves clients at every step. Our award winning culture is deeply rooted in a client-centric approach to help investors meet their goals — from insurance companies, corporate and public pension funds, sovereign wealth funds, endowments and foundations, and consultants to intermediaries, as well as individual investors.

*As of 12/31/21. Voya IM assets are calculated on a market value basis and include proprietary insurance general account assets of \$42 billion.

Principal Risks: All investing involves risks of fluctuating prices and the uncertainties of rates of return and yield inherent in investing. Price volatility, liquidity, and other risks that accompany an investment in equity securities of domestic and foreign companies, and small and mid-sized capitalized companies. International investing does pose special risks including currency fluctuation, economic and political risks not found in investments that are solely domestic. Risks of foreign investing are generally intensified for investments in emerging markets.

Options Risk: The Fund may purchase put and call options and may write (sell) put options and call options and is subject to Options Risk. The risk in writing a call option is that the Fund gives up the opportunity for profit if the market price of the security increases and the option is exercised. The risk in buying an option is that the Fund pays a premium whether or not the option is exercised. Risks may also arise from an illiquid secondary market or from the inability of counter-parties to meet the terms of the contract. When an option is exercised or closed out, the Fund may be required to sell portfolio securities or to deliver portfolio securities to satisfy its obligations when it would not otherwise choose to do so, or the Fund may choose to sell portfolio securities to realize gains to offset the losses realized upon option exercise. Such sales or delivery would involve transaction costs borne by the Fund and may also result in realization of taxable capital gains, including short-term capital gains taxed at ordinary income tax rates, and may adversely impact the Fund's after-tax returns.

This Fund has additional risks which you should consider, such as: **Market Discount Risk, Investment and Market Risk, Foreign Investment and Emerging Markets Risk, Foreign (non-U.S.) Currency Risk, Asia Pacific Regional and Country Risk, Issuer Risk, Equity Risk, Distribution Risk, Tax Risk, Dividend Risk, Small-Cap and Mid-Cap Companies Risk.**

The strategy employs a quantitative model to execute the strategy. Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively affect performance. Furthermore, there can be no assurance that the quantitative models used in managing the strategy will perform as anticipated or enable the strategy to achieve its objective.
